**2.3.2 Definition**

The ripple voltage of the outputs shall be measured at the pins of the output connector when terminated in the load impedance specified in figure1. Ripple and noise are measured at the connectors with a 0.1uF ceramic capacitor and a 10uF electrolytic capacitor to simulate system loading. Ripple shall be measured under any condition of line voltage, output load, line frequency, operation temperature.

**2.3.3 Ripple voltage test circuit**

**Figure 1. Ripple voltage test circuit**

## 2.4 Overshoot

Any overshoot at turn on or turn off shall be less 10% of the nominal voltage value, all outputs shall be within the regulation limit of section 2.0 before issuing the power good signal of section 5.0.

## 2.5 Efficiency

### At 115Vac

load	Efficiency	PF
20%	<b>87</b>	
50%	<b>90</b>	>0.95
100%	<b>87</b>	>0.95

In order to meet EuP\* requirements the following guidance must be met for the +5Vsb efficiency at 230V AC.

Load on 5Vsb	2013 Efficiency
45mA	$\geq$ <b>50%</b>
100mA	$\geq$ <b>55%</b>
250mA	$\geq$ <b>65%</b>
$\geq$ 1A	$\geq$ <b>75%</b>

## 2.6 Remote on/off control

When the logic level "PS-ON" is low, the DC outputs are to be enabled.

When the logic level is high or open collector, the DC outputs are to be disabled.

## 2.7 Output Transient Response

summarizes the expected output transient step sizes for each output. The transient load slew rate is =1.0A/us.

Table 3

Output	Maximum Step Size (% of rated output amps)	Maximum Step Size (A)
+12 VDC	<b>40%</b>	
+5 VDC	<b>30%</b>	
+3.3 VDC	<b>30%</b>	
-12 VDC		<b>0.1A</b>
+5 VSB		<b>0.5A</b>

For example,for a rated +5 VDC output of 18A,the transient step would be 30% x 18A=5.4A Output voltages should remain within the regulation limits of Section 2.1,and the power supply should be stable when subjected to load transients per Table 3. from any steady state load,including any or all of the following conditions:

- \* Simultaneous load steps on the +12 VDC,+5 VDC,and +3.3 VDC outputs  
(all steps occurring in the same direction)
- \* Load-changing repetition rate of 50 Hz to 10 kHz
- \* AC input range per Section 1.0

### 3.2 Over Temperature Protection

The power supply will be protected against over temperature conditions caused by loss of fan cooling or excessive ambient temperature. In an OTP condition the PSU will shutdown. When the power supply temperature drops to within specific limits, the power supply shall latch mode.

### 3.3 Over-power protection

The power supply will be shutdown and latch off when output power within 105~150% of rated DC output.

Note: Assurance machine can work at low voltage, full load won't damage machine.

### 3.4 Under voltage protection.

In an under voltage fault occurs, the supply will latch all DC outputs into a shutdown state when +12V, +5V & +3.3V outputs under 85% of its maximum value.

### 3.5 Over voltage protection

The over voltage sense circuitry and reference shall reside in packages that are separate and distinct from the regulator control circuitry and reference. No single point fault shall be able to cause a sustained over voltage condition on any or all outputs. The +5Vdc and +3.3Vdc and +12Vdc supply shall provide latch-mode over voltage protection and +5Vsb shall provide recover automatically as defined in Table.

Output	Minimum	Nominal	Maximum	Unit
+12V VDC	13	15	17	Volts
+5 VDC	5.5	6	7	Volts

### 3.6 Short circuit

An output short circuit is defined as any output impedance of less than 0.1 ohms. The power supply shall shut down and latch off for shorting the +3.3 VDC, +5 VDC, or +12VDC rails to return or any other rail. Shorts between main output rails and +5VSB shall not cause any damage to the power supply. The power supply shall either shut down and latch off or fold back for shorting the negative rails. +5VSB must be capable of being shorted indefinitely, but when the short is removed, the power supply shall recover automatically or by cycling PS\_ON#. The power supply shall be capable of withstanding a continuous short-circuit to the output without damage or overstress to the unit

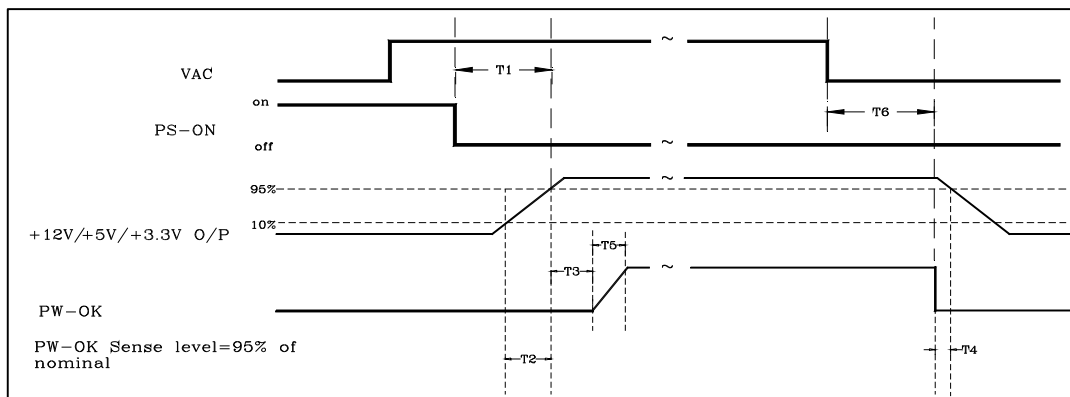

### 3.7 No load operation

No damage or hazardous condition should occur with all the DC output connectors disconnected from the load. The power supply may latch into the shutdown state.
